

Paulo Celso dos Santos Jr

Full-Stack Software Engineer | React, Python, PHP, AWS & System Integration

São José do Rio Pardo - SP | paulopcsj18@gmail.com | [linkedin.com/in/paulocsantos1995](https://www.linkedin.com/in/paulocsantos1995) | pauloc.dev

PROFESSIONAL SUMMARY

Full-Stack Software Engineer with experience building web applications, modernizing legacy systems, and delivering cloud solutions. Works across the software lifecycle, from requirements and architecture to development, testing, CI/CD, observability, and production support, with a focus on React, Python/PHP, APIs, and AWS. Delivered integrations that reduced average handling time by 8.3% and optimizations that cut processing from minutes to seconds. Contributes to technical decisions and code reviews and leads feature implementations.

PROFESSIONAL EXPERIENCE

SOFTWARE ENGINEER | REDE D'OR SÃO LUIZ | SEPTEMBER 2025 - PRESENT

Hybrid | Brazil

- Develops end-to-end solutions that automate hospital operational processes, from requirements gathering through deployment, monitoring, and production support.
- Built a unified React interface integrated with two legacy systems through APIs, reducing average handling time by 8.3%, from 6 minutes to 5 minutes and 30 seconds, while reducing the number of required clicks.
- Developed serverless APIs in Python with AWS Lambda to access existing functionality without relying on direct access to the legacy source code.
- Implemented infrastructure as code with Terraform on AWS and CI/CD pipelines in Azure DevOps, using Docker, Pytest, and Vitest to automate builds, tests, and deployments.
- Removed rendering bottlenecks with React DevTools and supports observability and incident response through Amazon CloudWatch logs and metrics.
- Contributes to architecture decisions, technical planning and refinement, code reviews, and stakeholder discussions; leads feature implementations and prepares technical task breakdowns for another engineer.

FULL-STACK DEVELOPER | L5 NETWORKS | APRIL 2024 - SEPTEMBER 2025

Brazil

- Developed customized features using PHP, CodeIgniter, Xcrud, jQuery, and Bootstrap to meet client-specific requirements and integrate changes into the existing platform.
- Created a modular card-based interface that improved navigation and supported the future addition of modules and features.
- Investigated and fixed complex bugs through root-cause analysis, with particular attention to data integrity and persistence.
- Optimized MySQL queries with EXPLAIN, removing bottlenecks and significantly improving screen load times.
- Developed a REST API with technical documentation to expose platform data and functionality to other applications.
- Contributed to technical planning and refinement, code reviews, and refactoring focused on performance, readability, and maintainability.

PROFESSIONAL EXPERIENCE - CONTINUED

SOFTWARE DEVELOPER | GUIÃN ASSIST | JANUARY 2023 - JULY 2023

On-site | Brazil

- Refactored an internal PHP reporting system by replacing HTML tables with CSV and PHPSpreadsheet, reducing processing time from minutes to seconds.
- Developed a web application with Python, PHP, HTML, and JavaScript, including web scraping from a public data source, to reduce manual work and accelerate access to information.
- Built a scalable, multi-user alarm-center management prototype using Python, Node.js, Docker, RabbitMQ, and MySQL.
- Implemented real-time alarm monitoring and user management, providing technical leadership for delivery and feature validation.

EDUCATION

MBA IN SOFTWARE ENGINEERING WITH ARTIFICIAL INTELLIGENCE | MARCH 2026 - EXPECTED MARCH 2027 |

Faculdade Full Cycle de Tecnologia - FCTECH

POSTGRADUATE SPECIALIZATION IN ADVANCED GO DEVELOPMENT | COMPLETED NOVEMBER 2024 |

Faculdade Full Cycle de Tecnologia - FCTECH

BACHELOR'S DEGREE IN COMPUTER ENGINEERING | COMPLETED AUGUST 2021 | Universidade do Estado de Minas Gerais - UEMG

TECHNICAL SKILLS

Programming languages: JavaScript, TypeScript, PHP, and Python

Frontend: React, Angular, jQuery, Bootstrap, HTML, and CSS

Backend and APIs: Node.js, Express.js, CodeIgniter, REST APIs, AWS Lambda, microservices, and serverless architecture

Cloud and DevOps: AWS, Amazon S3, CloudFront, DynamoDB, IAM, CloudWatch, Terraform, Docker, Azure DevOps, CI/CD, and Linux

Data and messaging: MySQL, DynamoDB, RabbitMQ, and asynchronous processing

Automated testing: Pytest, Vitest, Jest, and PHPUnit

Architecture and quality: Clean Architecture, DDD, SOLID, Design Patterns, event-driven architecture, observability, code reviews, application security, and the Brazilian General Data Protection Law (LGPD)

AI-assisted development: Codex, OpenCode, Harness, and AI-agent workflows

Additional knowledge: Go, Go Chi, Laravel, Vue.js, PostgreSQL, MongoDB, GCP, and Microsoft Active Directory

Languages: Native Portuguese and B2 English
